Clinic Summary Notes

Clinic Topic: Decoding Behavior for Optimal Learning Environments Beth Fox
Bfoxblizzard@gmail.com

- Remember Maslow! Check to see if any behavior matches needs from this hierarchy. See page 29 in Teaching Children Snowsports at <https://thesnowpros.org/education/digital-manuals-for-every-discipline/>.
- ABC's of Behavior Management
 - Antecedents: events that immediately precede behaviors
 - Behavior: an action resulting from an antecedent that communicates the existence of a need or desire usually for access, escape, attention, stimulation
 - Consequences: conditions that follow a behavior and usually include positive reinforcement - give desired experience/item to increase desired behavior (sensory, social, activity, choice, tokens), negative reinforcement - take away/remove a disliked experience/item to increase desired behavior and punishment - time out, remove desire experience/object to decrease unwanted behavior
- Build up your own toolbox or use some strategies listed below to direct behavior.
