

## **Ski Spectacular Instructor Academy**

**Hosted by The Hartford Ski Spectacular  
December 8-11, 2025**

### **Clinic Summary Notes**

**Clinic Title:** Tips and Tools for Teaching Guests with Brain Injury

1. Basic foundational information on numerous and various diagnoses of developmental/intellectual disabilities is needed for working in this population. Gain insight into how each diagnosis may have combinations of physical/intellectual/behavioral approaches in lesson planning.
2. Consider the wide range of symptoms, skills, and levels of ability in functioning that each individual with a brain injury possesses. Every lesson and every guest will be different.
3. The CAP Model is a guideline for determining a person's ability and potential within a specific age group. With our adaptive guests, chronological age may be less relevant than in a neurotypical lesson. Appropriately engage guests without compromising dignity. Thoroughly assess each area of CAP to ensure success in your lessons. (Refer to PSIA's Children's Instruction Manual- 2<sup>nd</sup> Edition.)
  - Cognitive (how people think)
  - Affective (how people feel)
  - Physical (how people move)
4. **All Behavior is Communication** – Learn to recognize signs/triggers that your guests may exhibit, and take fast action to remove the stimuli that may escalate to crisis.
5. Apply behavior management strategies when teaching guests with a cognitive diagnosis who have a behavioral component involved. Ask caregivers and/or our guest which strategies seem to be most effective for them.
6. Understand and review the [Learning Connection, Learning Partnership and Teaching/Learning Cycle](#) to set yourself up for successful lessons. (refer to PSIA-AASI Teaching Snowsports Manual).
7. Do the best you can to make environments predictable. Prepare for, and communicate potential triggers for that guest- such as avalanche guns, loud noises, banging doors, crowded places.
